

BUSINESS USES FOR FIBRESPEED

1

MAKE telephone calls for less

Say goodbye to phone line rental and hello to reduced call costs with Voice Over Internet Protocol (VoIP) – telephone on the Internet. From a few handsets to an entire call centre, you can easily run your phone system through FibreSpeed.

2

ATTEND meetings without leaving your desk

You waste hours travelling to meetings. So video conference from your desk instead. Everyone in your virtual meeting will appreciate time saving and greener working. FibreSpeed handles multiple video signals with ease, unlike broadband, and the glitch-free signal will impress.

3

REDUCE office overheads with mobile and home-working

With FibreSpeed you can work with the best people, wherever they are. Home-working and mobile working is made easy using FibreSpeed for communications and data transfer. Fast, secure and reliable, it's perfect for a flexible, mobile workforce.

4

WORK with the latest software – on demand, on budget

Avoid costly software purchases, licences and upgrades with Software as a Service (SaaS). Delivered via FibreSpeed, a SaaS application – like Microsoft Office – looks and acts like it's on your computer, except it's hosted by your ISP. By spreading the cost and only paying for what you use, SaaS is powerful, flexible, and ideal for business.

5

SHARE big files instantly or stream video and audio

Forget waiting for big files to upload, or writing data to discs for posting. With FibreSpeed you can share large files in seconds, or stream media for live viewing or listening. It's perfect for hi-definition audio and video and hi-resolution graphics files.

6

BE MORE SECURE with better CCTV protection

With FibreSpeed-powered CCTV you're sure to capture every detail. Watch and record colour, hi-definition images from multiple cameras with a fast FibreSpeed connection. Network CCTV circuits together and reap the efficiency benefits from a single monitoring centre.

7

BACK-UP that won't get your back up

Backing up data, storing files and disaster recovery planning is time-consuming, costly and complicated. With a FibreSpeed connection, protecting your digital assets is simple. In-house or through a third-party provider, it works unobtrusively behind the scenes. No delays, no risks, just peace of mind.

8

SAVE on space and costs with off-site servers

Servers take up space and cost time and money to power and maintain. A fast connection through FibreSpeed gives you the option of your servers being located and cared for elsewhere. Known as co-location, it's like having your own IT department, without the cost.

9

COLLABORATE more closely with multiple sites

No matter how scattered your business may be, across the country or around the world, a Virtual Private Network (VPN) linked through FibreSpeed is like having a secure Intranet in a single site. With seamless integration and instant access to shared services, you'll work more closely and more effectively with colleagues.

10

LAUNCH new services over the web

FibreSpeed's huge capacity gives you the power to launch new services to customers through the Internet, or improve existing ones with online provision. Web-based services can be cost-effective and generate recurring revenue.

11

STREAMLINE your IT infrastructure and reduce your budget

Phone lines, ISDN lines, leased Internet lines – sweep them all away and replace with one, affordable optical fibre connection. With dedicated access and capacity of 1gb and beyond, a single connection handles all your IT and communication requirements with incredible efficiency, and still gives you space to grow.

12

ENJOY faster Internet

Whether it's research, updating the blog or booking the business trip, every business benefits from fast Internet. FibreSpeed gives you next-generation Internet – optical fibre technology designed for data transfer. Once connected, you'll never look back.
