Press Release

World Class Communications go local

Carrier Wales demonstrate the power and potential of FibreSpeed technology with a special presentation breakfast on October 6th at the Gateway to Wales Hotel as part of Flintshire Business Week.

By implementing FibreSpeed technology network wide, across the region, Carrier Wales are making high-speed connectivity part of the everyday language of business in North Wales. The presentation breakfast will be the first live demonstration of exactly what FibreSpeed technology can do for business in the area.

FibreSpeed provide a high performance optical fibre network across 6 counties in North Wales and the border. This backbone of reliability is enabling business parks, industrial estates and other centres of business to stay ahead of the game when it comes to inward investment, stimulating economic growth, innovation and enterprise; putting Wales and the border at the forefront of this type of technology.

Carrier Wales is proud to help businesses connect to the FibreSpeed network and join the revolution in communication and is not only able to enable connectivity but can provide the entire package when it comes to business based internet solutions.

Communication in business today requires a 'full service' approach tailoring individual business needs to the technology available, be that Voice Over internet telephone, video conferencing or data backup. Carrier Wales recognises that together with FibreSpeed technology they are able to help businesses get on with doing what they do best. Ease of communication is key.

Using Carrier Wales to access the benefits of FibreSpeed has already proven great news for businesses in North Wales. One such company is Anchor Computer Systems of Parc Menai in Bangor who recently used Carrier Wales to connect them to the Parc Menai FibreSpeed network. Andy Pogson, Operations Manager for Anchor explains:

"We were moving to a new office here in Parc Menai and knew that the park was on the FibreSpeed network," he said.

"When we looked into it we saw it provided a really attractive option. With the leased line we had 5 megabit speed but FibreSpeed gives us 10, and we can always increase this if needs be."

Learn more about the communications revolution for North Wales by attending the Carrier Wales demonstration and finding out if your business could reap the rewards of joining the communications revolution.
